

» Worldwide leader in Factory  
Automation and Robotics

# FANUC Japan Headquarters

**FANUC**  
ROBOTICS

Tuesday, 04 December 2007

## **FANUC** Monthly Production Capacity (Status November 2005)

➤ <b>Robots</b>	<b>2500</b>
➤ <b>Robomachines</b>	<b>1600</b>
➤ <b>CNC</b>	<b>16000</b>
➤ <b>Servo Motors</b>	<b>65000</b>
➤ <b>Servo motor sensors</b>	<b>75000</b>

# Successful Global Player

**FANUC**  
ROBOTICS

## **FANUC** Market Shares (2004)

- **CNC worldwide: 63%**
- **Robot worldwide: 27%**

Tuesday, 04 December 2007

# Unit Volume by Region

**FANUC**  
ROBOTICS

Americas

Asia

Europe

***Europe is the fastest growing region  
for FANUC Robotics***

Tuesday, 04 December 2007

# >> Total Market Size and Market Share

**FANUC**  
ROBOTICS

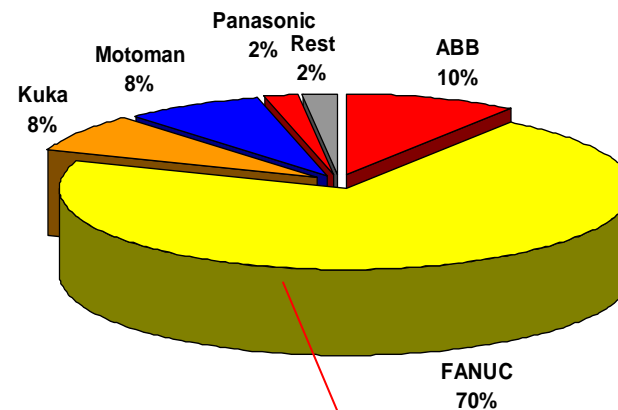

## ■ Total Market Size 2006

- » Spain 2017 units
- » Portugal 259 units

## ■ FRIB Share in Spain

## FRIB Share in Portugal

■ Total Installed base Spain: 4500 units

■ Total Installed base Portugal: 1000 units

Incl. spot VW AutoEuropa

Tuesday, 04 December 2007

# >> Base Business Market Size and Share

## Base Business Market: FRIB and Competitor Share

Market Size (1600 units)

## ABS Market: FRIB and Competitor Share

Market Size (600 units)

***FANUC & Kuka dominate in ABS***

# What makes us successful?

Great Employees!

Great Customers!

Our partners appreciate that

- › **We develop close partnerships with our customers**
- › **We never compete with our partners**
- › **We support our partners to develop new sales opportunities**

Our customers acknowledge FANUC's strength in:

- › **Product quality**
- › **Product range**
- › **Reliability**

# FANUC Worldwide<sup>®</sup>

**FANUC** Robotics  
Perpetual Motion

## CUSTOMER SUPPORT NETWORK

# FRIB Territory Overview

# Automotive Installed Base : FRIB

**FANUC**  
ROBOTICS

**More than 1600 units installed in Automotive**

Tuesday, 04 December 2007

## **FANUC** Robots worldwide Financial Highlights

- **Unit Booking 2004**                      **15,900 Robots**
- **Sales Revenue**                      **\$1.44 Billion**  
Financial year 2005
- **Installed Base (Jan. 2006)** **>150,000 Robots**

# FANUC

## ROBOTICS

# Wide range of applications

**FANUC**  
ROBOTICS

Arc welding

Cut, grind,  
debur, polish

Palletizing, packaging

Spot  
welding

Handling

Loading

Handling,  
deburring

Loading

Painting

Tuesday, 04 December 2007

# Unit Volume by Application (2005)

**FANUC**  
ROBOTICS

Tuesday, 04 December 2007

# Good Cooperation

**FANUC**  
ROBOTICS

**FANUC** Robotics  
P e r p e t u a l   M o t i o n

- Automation from a single source
- Compatible components with identical interface
- Common Networking and Diagnostic Tools

Tuesday, 04 December 2007

# Why Buy A Robot?

# Automation Drivers

**FANUC**  
ROBOTICS

## Higher asset utilization

- Robots improve productivity of expensive production lines by ensuring that
- manufacturing operations move at a
- constant pace with minimal machine
- time

## Reduced labor costs

- Robots reduce direct manufacturing labor needs and improve labor deployment

## Improved ergonomics and worker safety

- Robots minimize repetitive motion injuries and exposure to dangerous machinery

## Higher quality and lower scrap

- Robots provide higher quality and yield because of more controllable, predictable and repeatable process consistencies

Tuesday, 04 December 2007

# Robot Myths and Reality Checks

**FANUC**  
ROBOTICS

**Myth 1: Robots will eliminate my production labor costs**

- **Reality:** *robots are not panaceas; there will always be some jobs for which people are better than robots*

**Myth 2: Robots are expensive to set up and maintain**

- **Reality:** *as with personal computers, prices have declined while ease of use and performance have improved*

**Myth 3: Only high production runs can justify robot costs**

- **Reality:** *robots can perform different tasks for different parts*

**Myth 4: Outside of university labs, only the big automakers use robots**

- **Reality:** *robots have been in factories since 1962 and are a mature technology*
- **Reality:** *companies with < 500 employees now have the highest robot adoption rate*

Tuesday, 04 December 2007

# Alternatives to Robotics

*Simple relative ranking; more stars is better*

	People	Hard Automation	Robots (a.k.a. "Flexible Automation")
Flexibility	★ ★ ★	★	★ ★
Initial cost	★ ★ ★	★ ★	★ ★
Machine utilization	★	★ ★	★ ★ ★
Obsolescence	★ ★ ★	★	★ ★
Operating costs	★	★ ★ ★	★ ★ ★
Process consistency	★	★ ★	★ ★ ★
Redeployability	★ ★ ★	★	★ ★
Throughput	★	★ ★ ★	★ ★ ★
Time to production	★ ★ ★	★	★ ★
Uptime/reliability	★	★ ★	★ ★ ★
Value (total contribution to bottom line)	You decide!	★	★ ★ ★

# Workcell Validation with Roboguide

**FANUC**  
ROBOTICS

- Validate justification numbers for a workcell on a PC before ever turning a screw in the “real” world
- Import actual machine and part drawings for greater relevance
- Perform “what-if” analyses

Unregistered HyperCam

Unregistered HyperCam

- Optimize equipment layout by providing extremely accurate cycle time, reach, duty cycle, and collision predictions
- Transfer programs to real robots

Tuesday, 04 December 2007

# Other Considerations

## How Will Robots Affect Your...

- Productivity and throughput?
- Rework/scrap costs?
- The number of customer returns/rejects?
- Part quality/consistency?
- Employee ergonomics?
- Utilization of plant floor space per unit produced?
- Changeover times?
- Ramp-up time to volume production?
- Uptime of mold machines? Bottlenecks?
- Employee training?
- Employee turnover?
- Employees' acceptance of new technologies?
- Overall manufacturing strategy?

“Robots performing  
one task is great...so  
what else can you do  
for me?”

Parts 'R Us

*A key to justifying  
robot automation is  
using the robots'  
inherent flexibility to  
perform multiple  
ancillary operations  
for little or no  
incremental cost.*

# Broad Range of Applications

MATERIAL HANDLING	MATERIAL PROCESSING
» Assembly	» Deflashing/Trimming
» In-Process Part Transfer	» Deburring
» Machine Tending	» Dispensing
» Packaging	» Inspection/Measurement
» Packing	» Labeling/Reading
» Palletizing	» Painting
» Sorting/Kitting	» Powder Coating
	» Routering/Drilling
	» Scoring
	» Welding (Arc, Spot, Laser)

## Summary:

- Robot Definition
- Automation Drivers
- Myths and Realities
- Alternatives to Robotics
- Tax Incentives
- Payback and ROI
- Workcell Validation
- Range of Applications
- Application Cases

Q and A

# What is palletizing?

Typically “End-of-line” function

Usually involves positioning of product on a carrier (euro-pallet, chep-pallet, xx-pallet)

Robot can also handle pallet, tier sheet

Any kind of product

Carton box, crates, bags, barrels, loose product.

Product with/without plastic foil wrap

Robot positions product in pattern

# Example 1

M-410i series robot

Safety fence

Gripper, overhead vacuum

Carton box

Pattern

Euro pallet 800x1200

End of line conveyor

## Example 2

**FANUC**  
ROBOTICS

→ M-410i series robot

→ Bag gripper + pallet hook

→ Paper bag

→ pattern

Tuesday, 04 December 2007

## >> Example 3: concrete blocks

**FANUC**  
ROBOTICS

ing grippers

M-410 Paletizando barras de hierro

Tuesday, 04 December 2007

**M-410i series, palletising robot**

**M-420i series, palletising/packing robot**

**R-2000i series, general 6 axes robot**

**..M-16i series, general 6 axes robot**

What to take into account

**How many infeeds, how many pallets**

1<sup>st</sup>. Payload  
(inertia)  
2<sup>nd</sup>. Cycle time of cell

**Tier sheet y/n?**

**Bottom sheet y/n?**

**Pick pallet y/n? if yes, how many?**

**Type of gripper, how many products?**

**General lay-out**

# Robot vs. traditional palletiser

---

- ++ robot is more flexible (pattern, product, lay out)**
- ++ robot has less maintenance/problems**
- ++ robot uses less floor space**
- robot has lower capacity**

# Why robot, advantages for customer

---

**FANUC**  
ROBOTICS

**Flexible production**

**Higher output/production possible**

**Change of product/packaging/etc**

**Regulations on lifting, chemical exposures**

**Reduction of work force**

**Constant quality of work / palletising**

Tuesday, 04 December 2007

# Machine load unload

---

**Robots for machine load and unload**

**Vision systems**

**Robot software options**

Tuesday, 04 December 2007
